

Title	Neutron probe measurements from field evaluation of fusarium crown rot management strategies in high protein wheat		
Abstract	Neutron probe data for optimum management of Fusarium crown rot infected high protein wheat across multiple N management strategies. Data set contains design, collected Plant available water data and analysis of two years of field experiments exploring the yield and quality responses of fusarium crown rot infect wheat. For further harvest data see BLG212fluorescence data was collected from controlled environment chickpea seedling data following 12 days waterlogging.
