Title	2025 Field evaluation of Next Generation Soil Technologies (NGSTs) - Lockhart Block B
Abstract	This dataset contains replicated data for soil chemical properties, gravimetric soil water, biomass and grain yield responses to conventional and engineered soil ameliorants. Capacitance sensor soil water measurements were logged from a subset of contrasting treatments. Onsite weather data were collected. Predicta B soil DNA testing was used at trial commencement to assess soil pathogen presence. The experiment described as Block B was established in 2025. Ameliorants at this site were targeted at sodicity in both the surface and subsoil.

Lineage

This tabular dataset (textTable) was compiled from primary field collections conducted between 2024 and 2027. Raw field records were collated, cleaned, and validated using custom scripts in R to ensure data consistency and completeness. Spatial coordinates recorded during field surveys were standardized and referenced to the Geocentric Datum of Australia 1994 (GDA94 / Geographic, EPSG:4283).
